

# MapObjects--Windows Edition 1.2 System Requirements

---

This PDF contains system requirements information, including hardware requirements, best performance configurations, and limitations, for MapObjects--Windows Edition 1.2.

- PC-Intel Windows 95
- PC-Intel Windows 98
- PC-Intel Windows NT 4.0 Workstation
- PC-Intel Windows NT 3.51 Workstation

---

## MapObjects -- Windows Edition 1.2 on PC-Intel Windows 95

### Quick Links

[Hardware Requirements](#)

[Limitations](#)

*Product:* MapObjects -- Windows Edition 1.2

*Platform:* PC-Intel

*Operating System:* Windows 95

*Shipping/Release Date:* December 18, 1997

### Hardware Requirements

---

#### **CPU Speed:**

90 MHz\*

\*Minimum requirement.

#### **Processor:**

Pentium Class Processor

#### **Memory/RAM:**

64 MB\*

\*Minimum requirements. Depending on development and deployment purposes, RAM should be much higher.

#### **Notes:**

VGA or higher resolution monitor (Graphics card required)

## **Limitations**

---

**Product:** When using the AIT RADEON 7500 AGP video card, many stray lines may appear across the map. This occurs only on computers using the standard Microsoft video drivers that ship with Windows for that card. Go directly to ATI and get the most up-to-date driver for that card (6.13.10.6071 (dated 2002-06-04)) and install that. This should resolve the issue.

At the time of release, MapObjects-Windows Edition 1.2 was supported on Windows 95, 98, NT 3.51, and NT 4.0. However, due to the Microsoft support cycle, NT 3.51 and 95 are no longer supported. Refer to Microsoft support pages for OS lifecycle support status:
